

Rimini Street Database Management Services

Complement Expert Support with Comprehensive Management

Business Challenge

As enterprise databases increase in number, users, size, and demand, the need for database management and IT resources also increases. Adding open source databases to a mix of commercial databases brings new management challenges, because IT team members are frequently overburdened and often lack the knowledge and experience to implement and support them. Extending the return on investment of legacy databases also becomes difficult when longtime DBAs depart, necessitating a search to replace their database management skills.

The ideal database management solution? Database Management Services from Rimini Street, the software support partner you already know and trust to deliver expert, responsive service 24x7x365.

Solution Overview

Rimini Street Database Management Services complement existing Rimini Street L4 support to provide comprehensive management of commercial and open source databases.

Rimini Street services are ideal for enterprises that wish to:

- Augment IT team capacity to meet growing commercial database workload demands
- Relieve busy IT team members from new open source database management duties
- Replenish departing and hard-to-find DBA skills for legacy databases
- Integrate support and management for select databases
- Manage Oracle, IBM Db2, Microsoft SQL Server, or SAP databases (SAP HANA, SAP Advantage Database Server, SAP MaxDB, SAP SQL Anywhere)
- Manage PostgreSQL, MySQL, MongoDB, or MariaDB

Benefits

By leveraging Rimini Street Database Management Services, clients benefit from:

Better Model	Better People	Better Outcomes
<ul style="list-style-type: none"> - Simplify operations with integrated database support and management from a single provider - Augment IT staff capacity with business line precision to meet growing database demands 	<ul style="list-style-type: none"> - Capitalize on engineering-level expertise to optimize database environments - Supplement enterprise IT capabilities with missing DBA skills for select databases 	<ul style="list-style-type: none"> - Free IT staff from database demands to achieve higher-value business objectives - Leverage a mix of commercial and open source databases as dictated by business needs
