

Unification of Corporate and Regional Systems

PROJECT SNAPSHOT

A leading global provider of Offshore Service Vessels (OSVs) engaged Rimini Consult to migrate its Brazilian operations from PeopleSoft to SAP ECC integrating process improvements, enhancing usability and increasing system flexibility. The objective was clear: unify the company's corporate SAP systems by moving away from Oracle applications and onto a single, global ERP platform.

The project scope included the implementation of SAP Sales and Distribution (SD), Materials Management (MM), and Financial Accounting (FI) modules. Rimini Consult integrated these modules with external invoicing, tax, and accounting systems aligned to the company's global SAP template.

Leveraging its proven methodology, Rimini Consult facilitated collaborative workshops with business and IT stakeholders, jointly defining requirements and co-creating a business blueprint to adapt SAP to both global standards and unique local needs.

The successful rollout unified local and global operations into a single ERP platform, replacing PeopleSoft systems and delivering:

- Process improvements across business functions
- Comprehensive documentation for transparency and continuity
- Targeted user training under a strict deadline

The result: The engagement was completed on time and without disruption, even amid the ongoing global EHP8 upgrade. Recognizing the value delivered, the client extended its trust by inviting Rimini Consult to lead the EHP8 upgrade and rollout for its local operations.

By transforming a complex migration into a seamless transition, Rimini Consult enabled the client to achieve its strategic goal of a unified, global SAP platform and set the stage for greater efficiency, flexibility, and growth.

LOCATION

Brazil

SOFTWARE SUPPORTED

SAP ECC, PeopleSoft

Unified ERP Platform

Consolidated into a single SAP platform retaining functionality, integrations and regulatory alignment from the previous platform without disrupting operations.

Reduced migration risk

Deep understanding of both the PeopleSoft and ECC platforms streamlines the migration process and reduces the possibility of downtime during the transition.

Training and Documentation

Rollout included comprehensive user training and system documentation giving internal teams the knowledge and tools to run and optimize the new environment.
