

# End-to-end Oracle EBS implementation

## PROJECT SNAPSHOT

A leading pharmaceutical company in Indonesia needed to implement Oracle E-Business Suite (EBS) for one of its subsidiaries to establish a unified and scalable ERP foundation for future growth.

The project scope encompassed the end-to-end implementation of Oracle EBS Financials and SCM modules including the setup of new Ledgers (Set of Books), Operating Units, Legal Entities, Inventory Organizations, and Sub-Inventories. This effort connected the client's financial and operational landscape, ensuring compliance, control and consistency across business functions.

Leveraging disciplined execution and deep Oracle expertise, the Rimini Consult™ team designed and deployed transaction flows with built-in validations and approval controls and delivered 12 custom reports tailored to the subsidiary's specific business and regulatory needs. Collaborative workshops with finance and supply chain stakeholders ensured seamless alignment with corporate objectives and audit requirements.

**The result:** A single, standardized ERP environment that streamlined procurement, inventory, and order management processes, strengthened audit readiness, and reduced manual effort delivered within the planned timeline, effort, and cost estimates.

By transforming a complex multi-entity rollout into a compliant, efficient and future-ready platform, Rimini Consult enabled the subsidiary to accelerate operational efficiency, scale confidently and support continued innovation across the organization.

### INDUSTRY

Healthcare

### LOCATION

Indonesia

### SOFTWARE SUPPORTED

Oracle EBS

### Enhanced operational efficiency

Automation and streamlined workflows significantly reduced manual efforts, accelerating routine business processes.

### Implemented a unified platform

Finance, procurement and supply chain functions consolidated into a single integrated ERP system.

### Improved data-driven insights

Real-time access to financial and operational data supports informed strategic decisions.
