

Enterprise Software Strategy and Roadmap Development

Strategic guidance to unlock efficiency, reduce complexity and align IT with business goals embracing the Agentic AI Era

KEY BENEFITS

- > Accelerate executive alignment and improve decision-making**
 Clear, board-ready recommendations align Enterprise Software decisions with business goals, investment priorities, and risk tolerance.
- > Maximize ROI**
 Identify underused capabilities, reduce technical debt, and avoid unnecessary replatforming to improve performance and lower costs.
- > Enable innovation without risk**
 Modernize selectively with best-of-breed solutions and composable models — supporting innovation without the risks of full-scale transformation.

As a global company, we are constantly trying to achieve more value from every dollar we spend. To me, this means regaining control of our ERP software roadmap and optimizing our SAP software investment, especially since we saw no need to upgrade on the vendor's desired timetable, Rimini Street helps us remain on our timetable, while also cutting our annual maintenance fees in half, delivering much higher levels of service and enabling Univar to achieve far higher levels of efficiency with our IT budget."

— Erik Viens
CIO, Univar

Building a smarter path forward for your enterprise software

Organizations face growing pressure to make strategic decisions about their enterprise software — now board-level priorities. As legacy platforms near end-of-support, costs rise and technical debt grows, often forcing vendor-driven upgrades misaligned with business needs.

Meanwhile, agentic AI is transforming enterprise software with predictive insights, autonomous execution, and intelligent decision support. But without a clear strategy, AI investments risk becoming siloed or misaligned.

The path forward is a vendor-agnostic, modular roadmap that aligns software decisions with efficiency, cost optimization, and innovation—including responsible integration of agentic AI. This means moving beyond monolithic upgrades to composable, AI-driven solutions that deliver rapid value and agility.

As part of the Rimini Street portfolio, our Enterprise Software Strategy and Roadmap Development service empowers clients to modernize on their terms, reduce risk, and unlock agility—without costly upgrades or vendor lock-in. We help you take control of your software future with strategic guidance built for the Agentic AI Era, extending the value of existing investments while layering intelligent automation for transformative outcomes.

The Rimini Street solution

Our Enterprise Software Strategy and Roadmap Development service is a structured, insight-driven consulting offering that helps organizations make confident, informed decisions about their enterprise software. Delivered by seasoned strategists, it provides a clear view of where your environment stands today and where it can go based on your unique business goals.

What you get

Evaluation of enterprise software architecture, usage, and business alignment

We assess how your system is structured and used, identifying gaps between capabilities and business needs. This includes reviewing functional coverage, user adoption, and alignment with strategic goals.

Identification of inefficiencies and underused features

We uncover process inefficiencies, manual workarounds, and underutilized capabilities that could be optimized to improve performance, reduce costs, and enhance user experience.

Exploration of modernization options

We evaluate paths such as optimizing current software, adopting composable strategies, integrating AI, or upgrading — helping you weigh benefits, risks, and alignment with future needs. Our approach ensures modernization supports innovation, agility, and long-term value.

Vendor-neutral roadmap with analysis and next steps

We deliver a tailored roadmap with cost-benefit insights, risk considerations, and clear, actionable recommendations to guide your strategy — independent of vendor bias.

Our Approach

A structured, six-week service designed for clarity, confidence and action. Our Enterprise Software Strategy and Roadmap Development service follows a proven four-phase methodology that ensures every recommendation is grounded in business needs, fiscal feasibility and actionable next steps.

	Week 1	Weeks 2-3	Weeks 4-5	Week 6
Phase 0: 30-minute Quick Check Validate scope, resources, deliverables, and expectations to secure approval to proceed.	Phase 1: Project Definition Establish scope, expectations, and success criteria, and finalize workshops, templates, and kickoff plan.	Phase 2: Discovery Assess current enterprise software use, uncover pain points and future needs, and identify opportunities and potential solutions.	Phase 3: Evaluate Fiscal Feasibility Quantify the value, cost, and ROI of each opportunity with supporting resource plans, schedules, and KPI-based benefits.	Phase 4: Recommendations Deliver board-ready recommendations and a clear implementation roadmap aligned with business goals.

KEY FEATURES

- > **Vendor-agnostic guidance**
No hidden agendas
- > **Cross-platform expertise**
Deep experience across major enterprise software systems
- > **Outcome-driven methodology**
Focused on business value, not technology for its own sake

Why Rimini Street is the Smarter Choice

Rimini Street’s Enterprise Software Strategy and Roadmap Development service goes beyond traditional consulting or vendor-led engagements. Grounded in deep expertise and business-first thinking, we help clients modernize without disruption or lock-in. Unlike vendors pushing predefined upgrades, we deliver tailored guidance aligned to your priorities, operational realities, and innovation goals.

Backed by Rimini Street’s broader ecosystem, this service provides a vendor-agnostic roadmap with current-state analysis, risk identification, modernization options, and board-ready recommendations — empowering you to take control of your enterprise software future with confidence.

58 ERP Improvements Delivered

Rimini Street created a board-ready roadmap for a leading telecom company, identifying 58 ways to automate, streamline, and modernize operations.

Align enterprise software strategy with business agility

A well-aligned strategy is more than a technology roadmap — it’s a catalyst for innovation and long-term value. Rimini Street’s Enterprise Software Strategy and Roadmap Development service equips organizations with the clarity, confidence and executive alignment needed to make smart decisions that support growth and transformation.

Let’s build a roadmap that aligns with your business, not your vendor’s
